## THE REPRINT SERVICE

The subscribers to *MATHEMATICAL REVIEWS* can obtain, either on microfilm or as photoprint, the complete text of any article of which an abstract is printed, except books, or material of which the reproduction is prohibited by copyright law. The microfilm requires some sort of reading machine or projector in which standard 35 mm. double perforated film can be viewed. Only positive prints are furnished; that is, the projected image appears as black words on a white background. Photoprints, on the other hand, are on sheets 10" by 14", and are similar to photostats. They can be read directly without the aid of any reading device. They also are furnished as positives, that is, black words on a white background.

Articles not abstracted in the *MATHEMATICAL REVIEWS* will be copied at the rates mentioned below provided the material is available in the library of Brown University. All microfilm copies of articles other than those with MF numbers will be supplied as negatives.

### Cost

The cost of microfilm is 2¢ per exposure, *each exposure* (except in the case of a very few unusually large journals) *containing two pages of text*.

Photoprints cost 16¢ per sheet, *each sheet* (except in the case of unusually large journals) *containing two pages of text*.

The minimum charge for any one order (but not for any one item when several items are ordered simultaneously) is 50¢.

### How to Order

The process of ordering either microfilm or photoprint may be made clear by considering an example. Each abstract bears a serial number easily recognized by the fact that it is

always preceded by the abbreviation "MF". A subscriber who wishes the text of item 18 would first note that the original article occupied pages 590 to 608. It therefore covers 19 pages, and will require ten exposures of microfilm, or ten sheets of photoprint for its reproduction. Hence the microfilm charge for this particular item would be 20¢, and the photoprint charge \$1.60. The charges so computed apply on any order totaling 50¢ or more; if the total is less than 50¢, the charge for the entire order will be 50¢.

### In ordering:

1. Give your name and address.
2. State the serial number of the article or articles you wish.
3. Say whether you wish microfilm or photoprint.
4. Enclose cash for the amount of the order, either in currency, stamps, or by check.
5. Mail to *MATHEMATICAL REVIEWS*, Brown University, Providence, Rhode Island.

In the case of large journals, only one page of which can be accommodated on a microfilm exposure or a photoprint sheet, you will be notified of the extra charge before the order is filled, unless you have indicated on your order that the reprint is desired even at the higher price.

### Why Cash Must Accompany Order

Individual orders for either microfilm or photoprint are so small that if credit books were kept and bills rendered, the extra clerical expenses would be a large proportion of the total. By requiring payment in advance, these charges have been eliminated, and the price to the customer correspondingly reduced. However, libraries and institutions which make extensive use of the service may be granted the privilege of payment at stated intervals.

## ONE-SIDE EDITION OF MATHEMATICAL REVIEWS

In order to supply persons interested in making card files for subject indices of their own fields, or to add bibliographical remarks to the *REVIEWS* in the future, there will be available an edition of *MATHEMATICAL REVIEWS* printed on only one side of the paper. This special edition may be obtained for an additional payment of \$1.00 (that is, \$14.00 for subscriptions, and \$7.50 for members of sponsoring organiza-

tions). This edition will be folded but not stitched. Subscriptions for this edition should be entered as soon as possible since only a limited number can be printed. For the first four issues, only the two-side edition is available. A current regular subscription can be changed to the one-side subscription by informing *MATHEMATICAL REVIEWS* and paying \$1.00.

### MATHEMATICAL REVIEWS

*Published monthly by*

THE AMERICAN MATHEMATICAL SOCIETY, Prince and Lemon Streets, Lancaster, Pennsylvania

*Sponsored by*

THE AMERICAN MATHEMATICAL SOCIETY

THE MATHEMATICAL ASSOCIATION OF AMERICA

ACADEMIA NACIONAL DE CIENCIAS EXACTAS, FISICAS Y NATURALES DE LIMA

HET WISKUNDIG GENOOTSCHAP TE AMSTERDAM

THE LONDON MATHEMATICAL SOCIETY

*Editorial Office*

MATHEMATICAL REVIEWS, Brown University, Providence, R. I.

*Subscriptions:* Price \$13 per year (\$6.50 per year to members of sponsoring societies). Checks should be made payable to *MATHEMATICAL REVIEWS*. Subscriptions should be addressed to *MATHEMATICAL REVIEWS*, Lancaster, Pennsylvania, or Brown University, Providence, Rhode Island.

This publication was made possible in part by funds granted by the Carnegie Corporation of New York, the Rockefeller Foundation, and the American Philosophical Society held at Philadelphia for Promoting Useful Knowledge. These organizations are not, however, the authors, owners, publishers, or proprietors of this publication, and are not to be understood as approving by virtue of their grants any of the statements made or views expressed therein.

Entered as second-class matter February 3, 1940 at the post office at Lancaster, Pennsylvania, under the act of March 3, 1879. Accepted for mailing at special rate of postage provided for in the Act of February 26, 1925, embodied in paragraph 4, section 538, P. L. and R. authorized November 9, 1940.

## AUTHOR INDEX

- Abe, M. (Cf. Kodaira, K.)  
 Stetige Abbildungen der  $n$ -Sphäre in einen metrischen Raum. 71  
 Bemerkung über einfache Systeme. 121
- Abecasis-Manzanares, A. See Jaeger, C.
- Achyeser, N.  
 Konstruktion des Stromes um ein dünnes Profil. 171
- Achyeser, N. I. and Krein, M. G.  
 Quadrature formulas of P. Tschebysheff and A. Markoff. 197
- Adamoff, N. V.  
 Propriétés des transformations qui laissent invariable la courbe intégrale d'une équation du premier ordre. 288
- Agnew, R. P.  
 Rearrangements of series. 89  
 Tauberian theorems for double series. 92  
 Continuity and periodicity of measurable functions. 132  
 Tauberian conditions. 191  
 On "General Tauberian theorems." 279
- Agnew, R. P. and Kac, M.  
 Translated functions and statistical independence. 229
- Agostini, A.  
 Sopra gli abachi ad allineamento. 62  
 Baricentri di gravi non omogenei e formula generale per il loro calcolo determinati da Bonaventura Cavalieri. 114
- Ahlfors, L. V.  
 Theory of meromorphic curves. 357
- Aigner, A.  
 Mathematische Behandlung des Einsiedlerspieles in der Ebene und im Raume. 115
- Albert, A. A.  
 $p$ -adic fields and rational division algebras. 123  
 Introduction to algebraic theories. 241  
 Rule for computing the inverse of a matrix. 243
- Albert, G. E.  
 Quasi-metric spaces. 320
- Alexandroff, A. D.  
 Almost everywhere existence of the second differential of a convex function and some properties of convex surfaces connected with it. 155  
 Existence of a given polyhedron and of a convex surface with a given metric. 302  
 Additive set-functions in abstract spaces. 315
- Alexandroff, P. S.  
 Dimension der bikompakten Räume. 177  
 Correction to "Condition of metrization of topological spaces and the axiom of symmetry." 177  
 Bettische Gruppen und Homologisierung eines lokal-bikompakten Raumes. 323  
 General combinatorial topology. 323  
 General theory of homology. 324
- Alexits, G.  
 Espaces réguliers et problème de métrisation. 320
- Allen, E. S.  
 Six-place tables. 238
- Allendoerfer, C. B.  
 Euler number of a Riemann manifold. 20
- Alvarez Lleras, J.  
 Fundamentals of tropical meteorology. 268
- Ambarzumian, G. A.  
 Study of a special case of a continuous stochastic process. 230
- Ambrose, W. See Doob, J. L.
- Amemiya, A. See Kotani, M.
- Amerio, L.  
 Metodo di somministrazione per le serie di potenze e sua applicazione alla trasformazione di Laplace. 91  
 Tensioni e correnti in una catena di trasduttori quadripolari. 334
- Amodeo, F.  
 Curve normali piane di gonalità  $k$ . 13  
 Numeri  $p_n$  nel nuovo metodo per la geometria delle serie lineari delle curve algebriche. 13
- Andersson, W.  
 General formula for the normal mean errors of the coefficients in parabolic least squares graduation. 109
- Andrejew, N.  
 Energieausdrücke in der Akustik. 28
- Anfertieva, E. A.  
 Formules sommatoires et identités analytiques, liées à une classe de fonctions arithmétiques. 347
- Anghelutza, T.  
 Généralisation des fonctions analytiques. 87
- Apfelbacher, K.  
 Beziehungen zwischen Umgebungsräumen und Häufungsräumen. 177
- Arany, D.  
 Intégration de deux équations aux différences finies linéaires à deux variables. 310
- Archibald, R. C.  
 Obituary: Thomas Little Heath. 115  
 Outline of the history of mathematics. 305
- Archibald, R. G.  
 Waring's problem: squares. 251
- Arenberg, A. G.  
 Oscillations forcées d'un oscillateur sphérique dans un flux circulaire. 334
- Arley, N.  
 Distribution of relative errors from a normal population of errors. 232
- Arnett, H. D. See Colwell, R. C.
- Aronszajn, N.  
 Approximation des fonctions harmoniques et quelques problèmes de transformation conforme. 187
- Arrighi, G.  
 Reazioni vincolari d'impulso. 205
- Arsenin, B.  
 Projections de certains ensembles mesurables  $B$ . 256
- Artemieff, N.  
 Bestimmung der Realisierbarkeit der periodischen Bewegungen. 326
- Arvesen, O. P.  
 Détermination de la courbe génératrice d'une courbe algébrique. 13  
 Addition géométrique des courbes algébriques. 13
- Asano, K. and Nakayama, T.  
 Arithmetic in a subfield. 344
- Ascoli, G.  
 Decomposizione degli operatori differenziali lineari in fattori lineari e questioni geometriche che vi si riconnettono. 289
- Atanasoff, J. V. See Thorne, C. J.

- Aucoin, A. A.  
Diophantine equations of degree  $n$ . 145  
Solution of a quartic Diophantine equation. 346
- Auluck, F. C. (Cf. Chowla, S.)  
Waring's problem for biquadrates. 35  
Some theorems of Ramanujan. 88
- Aumann, G.  
Mittelpunktverzerrung bei konvexen konformen Abbildungen. 83
- Avakumović, V. G.  
Neuer Beweis eines Satzes von Hardy und Ramanujan über das asymptotische Verhalten der Zerfallungskoeffizienten. 41  
Verhalten Dirichletscher Reihen am Rande des Konvergenzgebietes. 191
- Awazaschwili, D. See Kupradze, V.
- Ayres, W. L.  
Definition of arc-sets. 70, 419
- Ayyangar, A. A. Krishnaswami. See Krishnaswami Ayyangar.
- Ayyar, M. Venkatarama. See Venkatarama Ayyar.
- Babitz, M. and Keys, N.  
Method for approximating the average intercorrelation coefficient by correlating parts with the sum of parts. 110
- Bachmann, F.  
Bewegungsgruppe einer ebenen Cayleyschen Geometrie. 9
- Bachvaloff, S.  
Méthode du trièdre mobile. 158
- Badalian, G.  
Simplification de l'équation de la trajectoire dans le problème de deux centres fixes. 207
- Badarau, G.  
Expression du coefficient de transmission d'une barrière de potentiel coulombien en termes de fonctions développables en série. 286
- Badellino, M.  
Calcolo delle funzioni di Bessel. 45
- Baer, R.  
Nilpotent groups and their generalizations. 1  
Sylow theorems for infinite groups. 2  
Nets and groups. II. 4  
Galois theory of linear systems over commutative fields. 122  
Abelian groups that are direct summands of every containing abelian group. 126
- Baer, W. S. J.  
Dreiseitige Pyramiden mit vier gleichen Höhen. 294
- Bagchi, H.  
Method of difference equations applied to the summation of series involving Legendre and Bessel functions. 44  
Note on cyclides. 159
- Baidaff, B. I.  
Divisibility of integers by integers ending in 1, 3, 7, 9. 34
- Balandin, A. A.  
Calculation of the intermediate equilibria in catalytic kinetics and the geometry situs. 140  
Structural algebra in chemistry. 140
- Balanat, M.  
Integral formulas for the intersection of sets. 155  
Généralisation de quelques formules de géométrie intégrale. 155
- Banerjee, D. P.  
New integral relations between Bessel and Legendre functions of unrestricted degree. 45
- Bang, A. S.  
Integers of the form  $a^2 \pm b$ , where  $a$  is prime to  $b$ . 247

# SUBJECT INDEX

The sign \* is used to mark only those books which contain a general exposition of the field in question. Should a cross-reference refer to a field or sub-field which does not occur in this subject index, this means that no paper reviewed in this volume has been classified as belonging to this field or sub-field.

**ABELIAN GROUPS** See: groups.

**ABELIAN INTEGRALS.** See: algebraic functions; algebraic geometry; elliptic functions.

**ABSOLUTE DIFFERENTIAL CALCULUS.** See: differential geometry (Riemannian geometry); vector calculus (tensors).

**ABSOLUTELY MONOTONE FUNCTIONS.** See: completely monotone functions.

**ABSTRACT SPACES.** See: differential geometry (Finsler spaces); ergodic theory; functional analysis; functions of real variables (functions in abstract spaces); measure and integration; sets; topology (topological spaces).

**ACOUSTICS.** Cf. Mechanics of continua; numerical methods (practical harmonic analysis).

## ERRATA

### VOLUME 1

P. 127: Rosseland.

By request of the Faculty Committee for the Differential Analyzer of the University of Pennsylvania attention is drawn to the fact that the article is in error in claiming the greatest capacity for the differential analyzer at Oslo, for the reason that, at the time the Oslo machine was built, the analyzer at Pennsylvania was larger than it. The statement that the analyzer at Pennsylvania has 10 integrators was based on older information; when the review appeared the analyzer actually already had 14 integrators.

### VOLUME 2

P. 20-21: Fenchel.

The last sentence of the review is erroneous and should be deleted.

P. 68: Krasner.

The reviewer regrets having committed an error in his review. The first paragraph of the review should be replaced by the following:

The author calls a set "semi-ordered" if its ordering relation satisfies: (I)  $a_1 < a_2 < \dots < a_n$  implies  $a_1 < a_n$ ; (II) for each  $a$  and  $b$  there is an element  $c$  such that (i) either  $c > a$  or  $c = a$ , and (ii) either  $c > b$  or  $c = b$ . A subset of a semi-ordered set is "confinal" if each element of the set is exceeded by some element of the subset. The author proves by transfinite induction that every semi-ordered set contains a confinal subset whose ordering relation may be weakened in such a way that the subset with its weaker ordering is isomorphic to the class of all finite subsets of a given set (where  $>$  means proper inclusion).

J. W. Tukey (Princeton, N. J.).

P. 70: Ayres.

The first three words of line three of this review, that is, the words "be closed and," should be omitted.

P. 93: Salem.

In the twentieth line from below read  $\sum F(r_n^2)$  instead of  $\sum F(n_n^2)$ .

P. 97: Geronimus.

In the second line read  $C_{i+k}$  instead of  $c_{i+k}$ .

P. 102: Day.

In lines 11-12 the words "no subsets which are" should be replaced by "a subset which is."

P. 113: Coolidge.

In the first line read Chasles instead of Charles.

P. 132: Moore.

In the third line read  $x^*$  instead of  $x^2$ .

P. 163: Coburn.

In the title read Hayden's instead of Haydens'.

P. 222: Van der Lijn.

The phrase "the lack of references is irksome" should read: "references are in the first part and their lack is irksome."

P. 280: Kawata.

In the second displayed formula read  $dV(i)$  instead of  $dN(i)$ .

# THE ANNALS of MATHEMATICAL STATISTICS

*Edited by*

# IMPORTANT McGRAW-HILL BOOKS

## Higher Mathematics for Engineers and Physicists. *New second edition*

By IVAN S. SOKOLNIKOFF, University of Wisconsin, and  
ELIZABETH S. SOKOLNIKOFF. 587 pages, 6 x 9. \$4.50

The authors present an accurate introduction to those branches of mathematics most frequently encountered by the engineer in his practice and by research workers in the applied sciences. A considerable portion of the material has been rearranged and supplemented by further illustrative examples, proofs, and problems.

## Elementary Mathematics in Artillery Fire

By JOSEPH MILLEN THOMAS, Duke University. Ready in January

This important forthcoming book contains all the mathematical information required by artillerymen, presented in concise, usable form. The topics include angles, tables, geometric theorems, model solutions of triangles, maps, location, parallax, difference in level, trajectory in vacuo, etc.

## Mathematics for the Aviation Trades

By JAMES NAIDICH, Manhattan High School of Aviation Trades, New York. In press—ready in December.

After a review of fundamentals of arithmetic, the author deals with specific aspects of the work which the aviation mechanic is likely to encounter. Related trade information is closely interwoven with the mathematics involved.

## Mathematics for Electricians. *New second edition*

By MARTIN H. KUEHN, Seneca Vocational High School, Buffalo, New York. 254 pages, 5½ x 8. \$1.75

Combines in a single volume practical electrical problems with the study and explanation of the mathematical principles used in solving them. The book is designed to help electrical students and practical electricians to acquire a workable knowledge of algebra, trigonometry, use of slide rule, etc.

## Mathematics

By JOHN W. BRENNEMAN, Pennsylvania State College. 210 pages, 6 x 9. \$1.75

This book offers brief treatments of simple operations and fractions, ratio and proportion, areas and volumes of simple figures, tables, formulas, fundamentals of algebra, geometrical constructions, trigonometry, etc. Many of the problems were suggested by men teaching in industry and technical schools.

## Mathematics for Electricians and Radiomen

By NELSON M. COOK, United States Navy. Ready in December

This practical book deals with such topics as literal numbers, addition and subtraction, multiplication, division, equations, literal equations, Ohm's law, resistance of wires, etc.

*Send for copies on approval*

**McGRAW-HILL  
BOOK COMPANY, Inc.**

330 West 42nd Street

New York, N. Y.

## Mathematical Reviews

### MICROFILM READING MACHINE OFFER OPEN UNTIL FEBRUARY 15, 1942

Attention is again called to the microfilm reading machines which are available to subscribers to Mathematical Reviews. These machines are designed to broaden the scope of our microfilm reprint service by making it available to individuals as well as to libraries. The reading machines are manufactured by the Spencer Lens Company and are sold at a retail price of \$37.50. Subscribers to Mathematical Reviews may take advantage of the following

#### Introductory Offer

On request a reading machine will be sent free of charge, except for shipping costs, to any subscriber who has paid his subscription in advance for three years beginning January 1942. The machines will be shipped by express collect from Buffalo, New York. Unless the supply is exhausted previously, this offer terminates February 15, 1942.

Subscriptions and requests for the machine should be addressed to

**MATHEMATICAL REVIEWS, Brown University  
Providence, Rhode Island, U.S. A.**

## THE MATHEMATICAL ASSOCIATION OF AMERICA

now has over 2300 individual and institutional members. There are twenty-two Sections, representing thirty-four states of the Union. The Association holds two national meetings a year, and the Sections each hold one meeting, or in some cases two meetings each year. All meetings, both national and regional, are reported in the official journal

### The American Mathematical Monthly

which is the only journal of collegiate grade in the mathematical field in this country. Most of its mathematical contributions can be read and understood by those who have not specialized in mathematics beyond the Calculus.

The Book Review department, appearing each month, is a valuable guide to current mathematical literature.

The Problems and Solutions hold the attention and activity of a large number of persons who are lovers of mathematics for its own sake. There are two divisions to this department, one for elementary and one for advanced problems.

Association members not only receive the Monthly, but also are entitled to purchase the Carus Monographs, six of which have already appeared, at special prices. Membership application blanks, a sample copy of the Monthly, and further information may be obtained from

**W. D. CAIRNS, Secretary-Treasurer  
97 Elm Street, Oberlin, Ohio**
